

## Outcomes

The research was the collaborative work of various branches in order to find an optimum and minimal solution for solving the problem for certain amount of homeless. To identify an optimal and minimalistic solution for a certain number of homeless individuals, the current research resulted from an associative work of several diverse branches. In order of using architecture as a real pulling force the profession was observed from not only the perspective of its secluded limitations, or vanity and excellence concepts serving the “strongest of the life”, but was a tool for collaborating of several branches (waste management, manufacturing) and serving people with life difficulties. It was observed that the utilization of architecture as a fundamental driver of the profession could be attributed to secluded limitations, we well as concepts of vanity or excellence, i.e. “strongest of the life,” in addition to being instrumental in collaboration of branches like manufacturing, waste management and more towards better serving individuals who encounter a challenging life.

Furthermore, the project carries a psychological character and is aimed in involving of homeless people into some kind of profession, along with the owning of a shelter. In addition, the project essays a psychological character, which is oriented towards engaging homeless individuals in certain kind of an employment or a job in addition to providing shelter ownership. There are few limitations, such as the project is new, and most of these people are uneducated in terms of complex constructions, but having transferred this scheme into real life in future more sophisticated and deep knowledge of the job may be taught to these people (which will also pull them back into society), and more elaborate and
